PROFESSIONAL SUMMARY

Senior Data Analyst and Business Process Analyst with 4+ years of experience in reporting, business analytics, data quality, process improvement, and cloud data solutions. Skilled in SQL, Power BI, Advanced Excel, Python, Azure Data Factory, Azure Databricks, Azure Synapse, ETL processes, data warehousing, data modeling, statistical modeling, predictive modeling, and data visualization. Strong background creating BRDs, FRDs, user stories, use cases, BPMN process models, gap analysis, impact analysis, stakeholder workshops, Agile/Scrum delivery, workflow optimization, and KPI/SLA performance reporting.

CORE SKILLS

- **Data Analysis & Reporting:** SQL, Power BI, Advanced Excel, Pivot Tables, VLOOKUP, Macros, Reporting, Business Analytics, Data Visualization, Data Validation, Data Mining, Statistical Modeling, Predictive Modeling
- **Cloud Data & BI Solutions:** Azure Data Factory, Azure Databricks, Azure Synapse, Azure Spark, Apache Spark, ETL Processes, Data Warehousing, Data Modeling, Data Architecture, Data Governance, Performance Monitoring
- **Business Analysis & Process:** Business Process Modeling, BPMN, BRD, FRD, Gap Analysis, Impact Analysis, Root Cause Analysis, Process Improvement, Process Mapping, Workflow Optimization, Metric Definitions, Reporting Logic
- **Project & Collaboration Tools:** Agile/Scrum, Jira, Slack, ClickUp, SharePoint, Change Request Management, Stakeholder Management, Meeting Facilitation, Workshops, Backlog Refinement
- **Professional Strengths:** Problem Solving, Analytical Skill, Attention to Detail, Communication, Presentation, Collaboration, Cross-Functional Teamwork, Decision Making, Adaptability, Conflict Resolution, Writing

PROFESSIONAL EXPERIENCE

Senior Data Analyst | Nexxvali Corp | June 2022 - Present

- Automated 90% of manual reporting using Power BI, SQL, and Advanced Excel, eliminating 40+ hours of monthly reporting work and improving data accuracy across departments.
- Designed and deployed Azure Data Factory ETL pipelines to improve end-to-end data processing efficiency by 35% and support real-time business intelligence reporting for leadership teams.
- Built and maintained executive Power BI dashboards for KPI, SLA, revenue trend, operational performance, performance monitoring, and business analytics reporting.
- Used Azure Databricks, Apache Spark, Azure Spark, and Azure Synapse to transform large datasets, support data warehousing, and deliver clean, validated datasets for enterprise reporting.
- Led a team of 4 analysts on Python-based predictive modeling projects using pandas and NumPy, increasing revenue forecasting accuracy by 20%.
- Performed statistical modeling and advanced analysis on customer datasets to identify behavior patterns, support marketing analytics, and improve customer retention by 18%.
- Implemented data quality governance, row-count reconciliation, testing, and validation frameworks that reduced errors by 30% across key business reports.
- Partnered with stakeholders to clarify reporting logic, metric definitions, business requirements, and dashboard acceptance criteria for data-driven decision-making.

Business Process Analyst | TechWahid LLC | March 2020 - May 2022

- Conducted gap analysis, impact analysis, root cause analysis, and process improvement reviews to identify workflow inefficiencies and recommend actionable business solutions.
- Authored BRDs, FRDs, process documentation, use cases, user stories, reporting logic, and metric definitions as a single source of truth for business and technical teams.
- Modeled end-to-end business processes using BPMN methodology and process mapping to create clear workflow diagrams for technical and non-technical stakeholders.
- Facilitated stakeholder workshops, requirement-gathering sessions, and cross-functional meetings to align teams on business needs, reporting requirements, and data-driven solutions.
- Managed change request lifecycle from intake, impact assessment, prioritization, implementation support, testing, and post-deployment validation.
- Collaborated with department heads during Agile/Scrum sprint planning and backlog refinement to define user stories, acceptance criteria, and implementation priorities.
- Used Jira, Slack, ClickUp, and SharePoint to track project milestones, document process changes, maintain knowledge base content, and support distributed team collaboration.

CERTIFICATIONS

- Microsoft Certified: Data Fundamentals
- On-Premise Data Analysis Certification—Agile Workflow, Python, Power BI
- Azure Data Analysis Certification - Azure Synapse, Databricks, Statistical Analysis
- Advanced Excel & SQL Certification

KEY ACHIEVEMENTS

- Reduced monthly reporting time by 40 hours through Power BI, SQL, and Excel automation, creating a 90% reduction in manual reporting effort.
- Improved data pipeline efficiency by 35% using Azure Data Factory, reducing processing lag and accelerating business decision cycles.
- Improved revenue forecast accuracy by 20% through Python predictive modeling and statistical analysis.
- Increased customer retention by 18% by identifying behavioral patterns and translating findings into actionable business requirements and reporting documentation.
- Reduced data errors by 30% using data quality governance, validation checks, reconciliation testing, and proactive reporting workflows.
